

# Filament Specification

## Cleaning Filament

As the name suggests, this is a material developed by our labs to help care for your 3D printer. Use this material to clean carbon deposits from the printer's hot end nozzle.

Available as 1.75mm or 2.85mm diameter filaments in 50g

Dimensional tolerance typically less than +/- 0.03mm

Optimum printing temperature 200-280°C

Suggested print bed temperature (Not Applicable)

### Packaging:

Each spool is hermetically sealed in an aluminium foil bag with silica gel. Additional cardboard packaging for protection in transit.

### Storage:

Retain in foil bag with silica gel when not in use and keep in dry location at room temperature.
